Experiment 4: Backward Chaining Engine with Askable Facts

Aim

To implement a backward chaining engine which is goal driven reasoning for car-fault diagnosis using askable facts.

Exercises

1. Add a “starter motor**”** fault using clicking sound and engine not cranking.

   Observe: which facts are asked and whether the correct fault is identified?

2. Change the order of hypotheses and observe the change in questions.

3. Add a “WHY**”** option to display the rule responsible for asking a question and observe the reason displayed when the user selects WHY.
